

# **402<sup>nd</sup> MISSION SUPPORT GROUP**

## **MISSION**

402<sup>nd</sup> Mission Support Group provides direct logistics support for Depot Maintenance repair facilities and provides plant facilities, equipment engineering, calibration, and installation support to the Wing's infrastructure. Due to the complexity of this group it is organized into two distinct squadrons: (1) the Industrial Services Squadron, which manages capital investment-related programs affecting the maintenance functions in the wing production and support groups and maintains and operates laboratories and provides technical support for industrial processes and (2) the Maintenance Materiel Support Squadron which is responsible for determining, establishing, maintaining, forecasting, and transporting inventory of consumable and exchangeable material required for depot maintenance. To meet the requirements of the repair facilities, the Maintenance Materiel Support Squadron utilizes the General Support Division (GSD) stock fund obligation authority to preposition inventory and is a vital link in the total supply chain to the war fighter.
