NICKNAME

OPERATIONS

The 56th Maintenance Operations Squadron ensures the health of a fleet of more than 180 USAF and Foreign Military Sales F-16 aircraft. The squadron provides extensive maintenance analysis data, maintains oversight of wing plans, scheduling, and documentation areas, and serves as the nerve center for all maintenance actions through the Maintenance Operations Center. Several other critical functions include the collection, tracking and forecasting of engine data for 200 engines and managing the end-of-runway operation providing the critical "last look" for every aircraft prior to take-off. The Quality Assurance office evaluates maintenance activities and provides feedback to key leadership. The Weapons Standardization Section qualifies, certifies, and evaluates weapons loading and maintenance crews. The Maintenance Training Flight provides aircraft maintenance and ancillary training for over 3,000 personnel, and is the liaison between Detachment 12, 372d Training Squadron, and base training. The squadron also manages environmental, safety, information technology, mobility, vehicle, facility and manpower programs for the entire 56th Maintenance Group.
